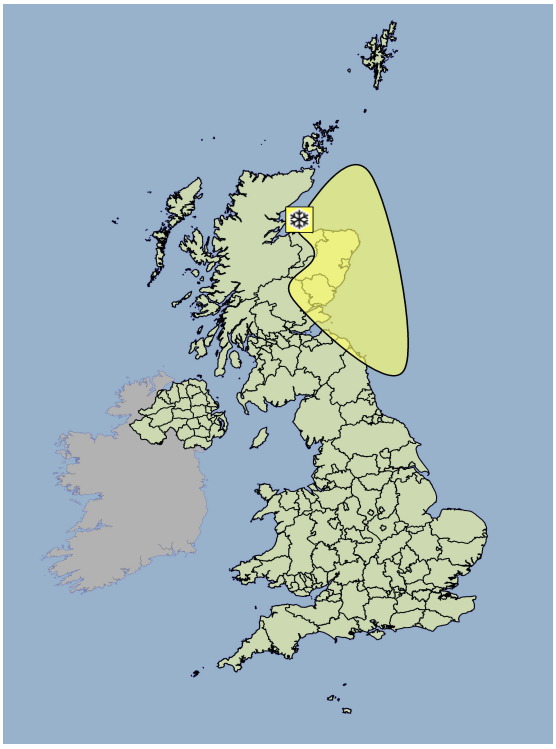
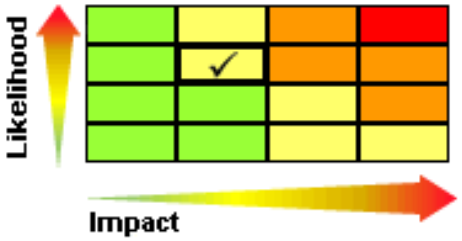
National Severe Weather Warning Service





Chief Forecasters Assessment
The airmass across northern Britain will remain exceptionally cold for any time of the year, let alone March. Fortunately for eastern Scotland and northeast England the earlier threat of more persistent, heavy snow seems to have receded, with a regime of scattered snow showers and night-time ice posing a lower risk of disruption overall.

The Met Office have issued a **Yellow Warning** of **Snow**

Valid from **22:00 on Thu, 21st Mar 2013** until **11:00 on Sat, 23rd Mar 2013**

Further snow showers are expected, bringing mainly slight accumulations of snow but perhaps a few cm over some inland and hilly parts. Ice may continue to be a problem night and morning, primarily on untreated surfaces.

The public should be aware of the possibility of further localised disruption, for example to travel.
